Build a website for my company NordRock Limited.
I have an initial website for the company designed with wordpress cms. However the design was never completed and there are several pages that are unfinished. Therefore, I want you to build a complete and a more robust website.
Get most of the information needed to develop the site from the initial website https://nordrockltd.com
From the website you can see that only three pages have NordRock Limited contents, the rest are either inactive or they contain demo contents from the wordpress theme.
Get information on the wordpress theme and figure out what contents are NordRock's original content and which are the demo contents from the wordpress theme.

COMPANY DESCRIPTION
The company is primarily an Extractive and Minerals Trading Company However it ventures into other industries like:

1. Mineral Operations
    a. Extraction
    b. Sourcing
    c. Trading
    d. ASM Formalization
2. Technology
    a. Providing tech solutions to complex global problems
3. Renewable Energy
    a. Creating innovative solutions around the Solar Power Revolution in Nigeria

FILES AND LINKS
To have an in-depth understanding of NordRock and its products and industries, access the following files:

a. "C:\Users\follo\OneDrive\Documents\NORDROCK\NordRock TECH Component.pdf"
b. "C:\Users\follo\OneDrive\Documents\NORDROCK\NordRock's Strategy Document_AG Partners_Pitch Dec_251127_171740.pdf"
   Note: This is a private pitch document some of the information in the document should not be public on the website
c. https://tracechain.nordrockltd.com/
   This is one of Nordrock's products, an innovative and proprietary mineral traceability solution . In order to understand it and provide a better description of the solution you can go through the github link: https://github.com/mealand/tracechain-app
d. https://agrotrace.nordrockltd.com/
   This is another product of NordRock, a proprietary traceability technology for agriculture. In order to understand it and provide a better description of the solution you can go through the github link: https://github.com/mealand/atims
e. Media Directory:
   "C:\Users\follo\OneDrive\Documents\NORDROCK\Media"
   This directory provides videos and images from NordRock's operations. Enhance and make all media files lightweight before use. Also remove all audio from video files before use

WEB DESIGN DESCRIPTION

Firstly and importantly, the website itself and the website's files should be well structured according to standard best practices. Use very corporate theme colors like the similar (should be better) to the initial website (nordrockltd.com). Also, the website should be robust, responsive, have a sleek-design and it should be animation/media.

User Interaction and Experience (UI/UX), a corporate theme and heavy animations are priority to the website. Even though I have provided a lot of text content, the website should be media heavy

For the menu of the website, Maintain:

a. Home
b. What We Do
c. Who We Are
d. Products
e. Join Us
f. Get In Touch

Convert the menu "Why Us" to "Why Choose Us" and create a new one called "Industries"

DEVELOPMENT AND DEPLOYMENT

Use this directory for building the website:
"C:\Users\follo\OneDrive\Documents\NORDROCK\nordrockltd-website"

I have created a git repository to upload the website files:
https://github.com/mealand/nordrockltd-website.git

For proper review, We'll deploy the completed website on a NordRock subdomain: https://newsite.nordrockltd.com before transferring it to the main domain.
